

# so many accessories a wide variety of accessories are supplied with the machine and increase its performances

Water faucet

connector

Geka water

hose 40m

Control box

kev

Geka air

tubing 16m

Spray gun and cleaning brush

Cleaning connector DN35-geka

Pump

Spray

Inject

Curved

spatula

Hopper extension

The hopper on the B30 can be equipped with an extension that will increase its capacity from 150 to 200 I.

Electric cable 3x4 mm 25m

equipped with

Stator and rotor

T-wrench for

cleaning shaft

Water suction

hose 5m

Mixing shaft

Cleaning shaft

Conical rubber hose 35-25 15m

**Tools drawer** All small items can be stored in the drawer located under the machine.

#### technical data

Pump motor Star wheel electric motor Water pump motor Air compressor Theoretical maximum output Pumping distance with conical hose Ø 35-25 Maximum pumping pressure Hopper capacity Load height Dimensions W x L x H mm Total weight Individual unit weight: Machine 100 Kg Mixer Pump

4.00 kW controlled through the inverter 0.30 kW - 12 revolutions controlled through the inverter 0.33 kW 280 L/min 16 - 18 - 20 l/min \* 25 m \* 20 bars 150 L (with 200 liter extension) 880 mm 1100x660x1565 268 Kg 168 Kg

\*With D 5-2.5 stator and rotor.

Depends on the material, consistency and the diameter of the hoses. The performance is guaranteed with the Bunker stators and rotors.

single-phase plastering machine for ready-mixed dry plasters

### ...a friend on the job site!

#### The single-phase B 30, a winning product... it works with 3 kW !

The single-phase B30 is a compact plastering machine, easy to use, it's ideal to mix, pump and spray dry ready-mixed plasters continuously on internal and external walls. It can be used manually with bags or in automatic mode using silos. Thanks to the best components and strong frame painted with epoxy dust, the B30 is a durable high quality product. Designed to work at 3 speeds, it can be used for a wide variety of materials: lime and cement based plasters, gypsum, anhydrite, insulating plasters, masonry mortar joint filling mortars, cement, and anhydrite based self-levelling screeds.

## The more **air** the better the **performance**

The single-phase B30 is the only plastering machine on the market with a **Boxer membrane compressor** that supplies up to 280 liters of air per minute. The compressor, being powered directly by the screw pump motor, allowed Bunker's technicians to **eliminate an electric motor**. Performances are similar to a three-phase machine.

> The electric control box is ergonomic and well protected. Using a speed selector, the user can change the pumping speed so that it can work with different outputs: 16 - 18 - 20 l/min.

#### Easily to dismount

The single-phase B30 is easy to dismount into single parts and can be reassembled on the construction site by a single operator without any tool or effort. This solution makes cleaning and maintenance much easier.

B 30 monofase

#### Practical and reliable

Choosing the Bunker B30 means that you can count on a reliable machine built in compliance with the CEE directives ready to face a wide variety of difficult work.
